

# Sports Fields & Public Lands

Issue: Public institutions are faced with sustainability challenges that see increasing public expectations for turf management programs to be economically, socially and environmentally responsible. Managers are challenged to provide a quality turf management program that eliminates the use of herbicides, reduces water consumption and living within today's budget constraints.

EnviroPerfect Solutions' has perfected a turf management program that offers managers a proven solution that delivers quality turf while meeting public expectations. Unlike traditional turf management programs that focus on killing weeds and feeding the turf, the EnviroPerfect Solutions program focuses on the biological health of the soil while sustainably supporting the turf with organic amendments.

Our soil biological specialist will work with your team to develop best practices for your specific requirements.

"In spring and fall our school fields are used daily, in all types of weather. Football, soccer and field hockey are particularly tough on our fields. The EnviroPerfect Solutions program has accelerated high traffic area

recovery, and reduced compaction and overall provided a better playability of the field. EnviroPerfect Solutions has helped us to develop a turf management program that surpasses our expectations and moving us closer to our goal of being Canada's greenest most environmentally school district." R. Illick Title Calgary Public School Board

"The Town of Sylvan Lake's green mandate challenged our department to develop practices that would meet community expectations for environmental responsible, safer play areas and green spaces. Since implementing the EnviroPerfect Solutions program, the look and health of our tot lots and green spaces exceeds our expectations.

Community feedback has been positive; and one community Association has adopted the program for green spaces under their control. Overall our green spaces have never looked better. R. Lebsack Title Town of Sylvan Lake

### **The Program and Services**

We customize your program to meet your goals, budget and expectations. EnviroPerfect Solutions can assist with presenting the merits of this program through educational sessions for decision makers and community stakeholders.

Program recommendations are based on an evaluation of your current turf management

The methods we use are safe, sustainable and responsible. Our program reduces water usage by 30 to 50 per cent. With healthy grass and a thriving microbiological system, roots can grow to depths of 8 to 12 inches. This means tapping into water that does not evaporate, even in summer hot spells. You save money on your water bill, and rainfall becomes a much more efficient supply of water for your land. The ground becomes softer as the naturally occurring microbes aerate it. This serves to give better drainage and water retention, better airflow and makes for a safer and more pleasant surface for children playing on lawns or sports.

practices, equipment, field evaluations, problem areas and challenges. EnviroPerfect Solutions provides quality biological and organic amendments required to implement the program, coupled with training and ongoing support to operations personnel. Should you require, EnviroPerfect Solutions offers a total service package that includes application.

Sports fields are probably one of the most challenging turfs to care for due to the constant traffic from football, soccer, field hockey and other activities. EPS works with your people to provide a safe and durable turf for the participants.

Urban lands such as parks, tot fields and green spaces also require care and as a municipality you want to ensure that the program used is safe and environmentally sustainable.

EnviroPerfect uses only 100 per cent organic ingredients to achieve a great turf naturally.
