

QUANTUM GROWTH™

ARE YOU READY TO GROW THE HEALTHIEST PLANTS POSSIBLE? WANT TO CUT THE WATER AND FERTILIZER YOU USE IN HALF? LET US SHOW YOU WHAT QUANTUM GROWTH CAN DO. QUANTUM GROWTH IS A LIQUID COMPLEX MADE UP OF THE SAME MICROORGANISMS THAT BEGAN LIFE HERE ON EARTH AND IS NOW AVAILABLE TO YOU.

How It Works

Quantum Growth is a living consortium of microorganisms including photosynthetic strains designed especially for the treatment and growth enhancement of all types of plants including fruits and vegetables, turf, trees, shrubs, ornamentals and flowers. Regular use restores nature's microorganisms to the soil allowing the plant to absorb the nutrients it needs to reach its full growth potential. The results are evident in the form of more bountiful blooms, larger and more plentiful fruits and vegetables, well-established root systems, thicker stalks and even greener leaves.

A healthy soil has a high microbial content. Excessive use of pesticides, herbicides and fumigants depletes the soil of these all-important microorganisms. Quantum Growth actually helps reset the soil to its original, enriched state. The

microorganisms in Quantum Growth convert light, carbon and even fertilizer into sugar, or plant food, more than 10 times faster than the plants would themselves. A biologically active soil is like having a fertilizer factory making 10-5-2 continually.

The microorganisms in Quantum Growth help a plant retain water by capturing water molecules as the plant exhales through the root zone. Combining oxygen and hydrogen to build water, the microorganisms store the water and are able to release it to the plant in dry conditions.

The microbes are fighting for their home, the host plant. Gause's Law of Competitive Exclusion states "two species competing for the same resources cannot stably coexist if other ecological factors are constant. One of the two competitors will always overcome the other, leading to either the extinction of this competitor or an evolutionary or behavioral shift towards a different ecological niche." Since the photosynthetic bacteria double in population every five minutes and most pathogens and diseases double in 48 to 72 hours, many times the microbes will win by simply out-populating the enemy.

...

The Quantum Growth Series was designed to save water, reduce fertilizer runoff, grow healthier plants and increase yield. Each unique product may be used independently or in combination, as determined by the needs of a grower. The Quantum Growth Series was formulated to be incorporated into growers' existing cultural practices and in addition to commonly used products.

Quantum-Light™

A unique proprietary consortium that features select photosynthetic microorganisms and natural growth factors that drive plant energy function. This microbial consortium maximizes plant photosynthesis and increases additional reserve energy from nutrients, carbon, and light. Quantum-Light contains no humic component. This breakthrough discovery is the core discovery in the Quantum Growth series

Quantum-VSC™

A wide-ranging microbial consortium, which includes the core technology of Quantum-Light along with additional spore-forming microbes selected for their ability to breakdown accumulated organics, such as thatch, black layer, and detritus. Through this breakdown process, the nutrients within the material are released and available for plant growth. It also includes a Humic component to improve nutrient uptake.

Quantum-Revive™

A revision of the core technology to address specific plant health concerns. Those concerns include assisting plants to recover from drought, disease, and insect damage. Quantum-Revive does not contain a humic component.
