

M.B. Webb Farms Commercial Pea Grower

“I was told about the science behind the Quantum Growth and it just made sense to me. After working with it on two successive plantings this year, all I can say is that it gives the plants what the plant needs when it needs it. If the plant needs nitrogen, it gives it to it. If the plant needs water, it releases water. When the soil needed oxygen, it released oxygen into the soil. Quantum Growth has been the key to growing good crops this year for me. To produce over 300 bushels per acre, with new growth on these peas, while my neighbors’ 50 acres of peas across the street yielded 130 bushels. You can’t question this kind of success, and I strongly recommend it!”
